

Tony Chan

312-292-6075 | tonychan3103@gmail.com | <https://www.linkedin.com/in/tchan2003/>

Computer Science student at UIUC focused on backend engineering and data-driven applications, with experience building scalable full-stack systems using Python, React, and cloud infrastructure.

EDUCATION

University of Illinois at Urbana-Champaign

B.S. Computer Science + Advertising; GPA 3.17

Champaign, IL

Aug. 2023 – Expected December 2026

University of Illinois At Chicago

B.S. Computer Science; GPA: 4.00

Chicago, IL

Aug. 2022 – May 2023

Relevant Coursework: Database Systems, Software Design Lab, Data Structures and Algorithms, Tech & Advertising Campaigns, Text Information Systems, Advanced AI Web Application Development

PROJECTS

Applytics - AI Powered Inbox Assistant | *TypeScript, Next.js, React, Tailwind, PostgreSQL, Gmail API, OpenAI API*

- Engineered analytics and action systems to track application conversion rates, detect deadlines, and surface time-sensitive tasks, enabling users to manage job search workflows and reduce missed opportunities
- Integrated Gmail API with OAuth 2.0 to securely ingest and process user emails, designing a fault-tolerant classification pipeline using OpenAI structured outputs with rule-based fallback, and persisting normalized data in Supabase (PostgreSQL)
- Designed and implemented an end-to-end email processing pipeline that ingests, classifies, and normalizes unstructured Gmail data into a structured job application workflow

Behavioral Finance Tracking App | *Python, React, TypeScript, Vite, Django REST Framework, PostgreSQL*

- Built a full-stack Behavioral Finance Dashboard with Django REST Framework, React, and TypeScript, implementing 12+ end-to-end features including authentication, transaction analytics, budgeting, goal tracking, forecasting, anomaly detection, and CSV import/export.
- Designed and shipped a user-scoped analytics platform with 10+ REST API endpoints, interactive dashboards, 6 KPI summary cards, chart-based visualizations, and behavioral insight workflows that transform raw transaction data into decision-support signals.
- Developed ML-inspired anomaly detection and lightweight forecasting features to flag unusual transaction spikes, project end-of-month spending and savings, and surface over-budget risk, demonstrating strong full-stack engineering, data analysis, and product-thinking skills

watch.io - Watch Collector's Network | *Python, JavaScript, Flask, SQLite*

- Built a full-stack social platform for watch collectors to track, customize, and showcase collections, with real-time price monitoring, marketplace integration, and community features
- Designed and optimized a multi-table relational database on Google Cloud Platform, supporting 200K+ entries of historical and live price data, user collections, and social interactions
- Engineered a cross-platform application with a Flask backend and Flutter frontend (FlutterFlow), deployed on a GCP VM to ensure scalability and a seamless user experience

EXPERIENCE

Website Intern

Bluetiful Design

June 2022 - Aug. 2022

Chicago, IL

- Created wireframes and redesigned website pages to improve user experience and navigation
- Combined and edited footage and images for Instagram Reels, achieving over 10,000 views, showcasing Bluetiful Designs' offerings to potential customers

PROFESSIONAL EXPERTISE

Programming: C++, HTML + CSS, Java, JavaScript, Python, Django, APIs, PostgreSQL, TypeScript, React, Next.js, Tailwind, Google Cloud Platform, Git, Data Pipelines

Clubs: UIC ACM-WebDev, Lambda Phi Epsilon
